

PA PFAS Multi-site Health Study

Parents or guardians can call **877-267-2890** for a quick phone screening.

Does PFAS exposure lead to health problems in children?

Historically, Perfluoroalkyl Substance (PFAS) chemicals were found in the drinking water supply in this community.

Participation in this study gives you:

the level of PFAS chemicals in your body

up to \$75 for your time and cooperation

the opportunity to earn community service hours.

The PA PFAS Multi-site Health Study will help us learn if PFAS exposure may lead to ADHD (hyperactivity) in children and other health conditions, such as:

Higher cholesterol levels

Lower vaccine response

Specific diseases related to changes in liver, thyroid, or kidney function

Ulcerative colitis

Cancer
